

Muhammed Sayeedur Rahman

AI/ML Engineer | Python | PyTorch | FastAPI | React

+91-9940560004 | muhammedsayeedurrahman@gmail.com | GitHub | LinkedIn | Chennai, India

Aspiring AI/ML engineer with hands-on experience in medical AI, graph-based AML detection, and on-device ML. National hackathon winner with a 9.5 CGPA in Computer Science.

EDUCATION

B.S. Abdur Rahman Crescent Institute of Science and Technology	Aug. 2022 – May 2027
<i>Bachelor of Technology in Computer Science & Engineering</i> CGPA: 9.5 / 10	Chennai, India
Sana Model School	2018 – 2022
<i>Higher Secondary (HSC) – 78.6% Secondary (SSLC) – 88%</i>	Chennai, India

EXPERIENCE

IT Intern	Mar. 2026 – May 2026
<i>Medfits</i>	Chennai, India
Validated critical e-commerce workflows — authentication, checkout, and product catalog — across the <u>realis.in</u> platform, improving software quality before production release	
Data Analytics Intern	Jul. 2025
<i>Chennai Port Authority (Government of India)</i>	Chennai, India
Processed and validated 12 months of import–export and cargo operations data for the <u>FY 2024–25 Annual Report</u> using Python (Pandas); performed data cleaning, deduplication, and missing-record imputation across 10+ operational datasets	

PROJECTS

ExplainMyXray <i>Python, PyTorch, Streamlit, FastAPI</i>	Feb. 2026
- Built an AI-powered chest X-ray diagnostic system generating structured radiology reports with spatial disease localisation using Google MedGemma-4B; submitted to the Kaggle MedGemma Impact Challenge - Fine-tuned on 34,000 PadChest X-rays, achieving 84.5% token accuracy and 100% zero-shot spatial generalisation on consumer GPUs (6 GB VRAM)	
AuraShield – On-Device Scam Detection <i>Android, Python, ONNX Runtime</i>	Mar. 2026
- Developed an Android app scanning notifications in real-time using a fine-tuned DistilBERT classifier (64 MB int8) running entirely on-device with zero internet permissions - Engineered a hybrid ML + rule-based engine covering 8 scam categories (UPI fraud, OTP phishing, KYC threats); trained on 400 Indian-context samples — 100% validation accuracy	
MuleCatch – Graph Intelligence for Mule Account Detection <i>Python, Neo4j, FastAPI, Docker, Kafka</i>	Mar. 2026
- Architected a graph-based AML system for Indian Overseas Bank (IOB CyberNova Hackathon) using Neo4j and a 4-layer detection pipeline — rule engine, smurf-weighting, Louvain community detection, and GNN scoring - Deployed full stack via Docker Compose with Kafka streaming, React investigator dashboard, and sub-60s real-time detection with explainable alerts and FIU-IND compliant STR export	

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C++, C

AI / ML: PyTorch, Hugging Face Transformers, Scikit-learn, ONNX Runtime, Pandas

Web & Mobile: FastAPI, Flask, React, REST APIs, Android

Tools & Platforms: Docker, Git, GitHub, Neo4j, Kafka, Linux

ACHIEVEMENTS & CERTIFICATIONS

- 1st Place** – Chakravyuha 1.0 National 24-Hour Hackathon (AI/ML domain), Sri Sairam Institute of Technology, Mar. 2026
- Shortlisted** – IOB CyberNova Hackathon, Indian Overseas Bank
- Infosys Springboard** – SQL Certification
- IIT Bombay** – Advanced C++ Certification
